

Oklahoma St. Petition - August, 2025

We, the residents and homeowners of W. Oklahoma St., petition the Municipal Services Committee and the City Council of the City of Appleton, WI, to vote to maintain the current width of our street for the purpose of preserving parking options on both sides of the street.

Our street needs sufficient parking options. As with most households, residents having two or three cars is common. However, being an older neighborhood, houses have single lane driveways, and often single-car garages, requiring parking on the street. Home improvement contractors and delivery drivers frequently block part of the street. Parking is not available on Richmond St. or Mason St., and parking needs from those streets spill onto our street. Students from Appleton West High School park on our street. Current parking rules, such as the 2-hour time limitation, overnight parking restrictions, and providing proper egress to driveways, are not being enforced. These issues will be exacerbated by narrowing the street and limiting parking to only one side of the street.

We are deeply saddened that a minimum of 41 trees will be lost on our street. However, by signing below, we indicate our support for maintaining the current width of our street to preserve our parking options, with the full understanding that to do so, an additional 13 trees will need to be removed.
